6 12 36 6XNPL

Commercial Acoustics model NPL sound attenuators are engineered to achieve a maximum insertion loss with virtually No Pressure Loss. NPL sound attenuators feature galvanized steel construction and an acoustical filled extended width outer casing that does not add additional static pressure loss to the system with negligible Self-Generated Sound Power levels. NPL sound attenuators are well suited for applications with high air stream velocities and for systems which can not afford additional static pressure losses.
