MODEL NF-SDS20

CIRCULAR

NOMENCLATURE EXAMPLE:

DIAMETER	LENGTH	MODEL
24 Ø	48	NF-SDS20-HP

Commercial Acoustics' **NF** no-fill silencers are designed and engineered to meet the demanding the acoustical and aseptic requirements of today's high-tech environments. **NF** no-fill silencers contain **NO ACOUSTICAL FILL** which eliminates possible fiber erosion and bacteria breeding grounds. The **NF** no-fill silencer is ideal for all HVAC systems especially clean room applications such as hospital operating rooms, research laboratories and electronic manufacturing, pharmaceutical, food and dairy plants. Standard construction is G90 galvanized steel. Also available in aluminum, 304 and 316 stainless steel.

Air flow ratings shown include static regain. Therefore, if silencers are installed immediately before or after elbows, transitions, at the intake or discharge of the system, or without duct, allowance to compensate for such conditions must be included when calculating the operating static pressure loss across the silencer. Failure to make allowances for these conditions can add several velocity heads to the static pressure loss of the system.
