## ENGINEERING DATA SHEET

Supersedes No. 767-89

## MODEL NFS

RECTANGULAR

### NOMENCLATURE EXAMPLE:

WIDTH HEIGHT LENGTH MODEL  
**24 24 36 NFS**

Commercial Acoustics' **NF** no-fill silencers are designed and engineered to meet the demanding acoustical and aseptic requirements of today's high-tech environments. **NF** no-fill silencers contain **NO ACOUSTICAL FILL** which eliminates possible fiber erosion and bacteria breeding grounds. The **NF** no-fill silencer is ideal for all HVAC systems especially clean room applications such as hospital operating rooms, research laboratories and electronic manufacturing, pharmaceutical, food and dairy plants. Standard construction is G90 galvanized steel. Also available in aluminum, 304 and 316 stainless steel.

**Helpful Equations:** Face Area = (Width in inches x Height in inches) ÷ 144

Face Velocity = CFM ÷ Face Area in Sq.Ft.

$$\text{Silencer S.P. Loss} = \left( \frac{\text{Face Velocity}}{\text{Tabled Velocity}} \right)^2 \times \text{Tabled S.P. Loss}$$

#### STANDARD CONSTRUCTION FEATURES

Outer Casing — Solid 22GA G90 galvanized steel  
 Inner Partitions — Perforated 22GA G90 galvanized steel  
 Acoustical Fill — Inorganic mineral glass fiber meeting NFPA 90A, UL 723, and ASTM E84 of sufficient density and packed under at least 5% compression to eliminate voids and to obtain cataloged ratings  
 Maximum Differential Pressure — 8 in. wc. as tested in accordance with UL 181, Section 17

#### When adding any two decibel levels together to an accuracy of 1 dB

Difference between two dB levels	Add to the higher dB level
0 or 1 dB	3 dB
2 or 3 dB	2 dB
4 to 9 dB	1 dB
10 dB or more	0 dB

Air flow ratings shown include static regain. Therefore, if silencers are installed immediately before or after elbows, transitions, at the intake or discharge of the system, or without duct, allowance to compensate for such conditions must be included when calculating the operating static pressure loss across the silencer. Failure to make allowances for these conditions can add several velocity heads to the static pressure loss of the system. All acoustic and aerodynamic performance obtained on a 24" x 24" cross section production unit.
