MODEL UHR-LF-MB

RECTANGULAR

**No
Fiberglass
Fill**

NOMENCLATURE EXAMPLE:

WIDTH	HEIGHT	LENGTH	MODEL
24	24	36	UHR-LF-MB

Commercial Acoustics sound attenuators are engineered to achieve a maximum insertion loss and a minimum pressure drop. Commercial Acoustics sound attenuators feature airflow design for efficient aerodynamic performance. Galvanized steel construction and an acoustical fill that is an all natural material with each individual fiber having been treated, during manufacture, with an EPA registered anti-microbial agent for protection against mildew, mold, fungi, pests and for fire resistance guarantee excellent reliability and performance.

Helpful Equations: Face Area = (Width x Height) ÷ 144

Face Velocity = CFM ÷ Face Area in Sq.Ft.

$$\text{Silencer S.P. Loss} = \left(\frac{\text{Face Velocity}}{\text{Tabled Velocity}} \right)^2 \times \text{Tabled S.P. Loss}$$

STANDARD CONSTRUCTION FEATURES

- Outer Casing — Solid 22GA G90 galvanized steel
- Inner Partitions — Perforated 22GA G90 galvanized steel
- Acoustical Fill — Mold resistant, all natural fiber meeting UL 723, ASTM E84
- Maximum Differential Pressure — 8 in. wc. as tested in accordance with UL 181, Section 17

Octave Band	1	2	3	4	5	6	7	8

When adding any two decibel levels together to an accuracy of 1 dB

Difference between two dB levels	Add to the higher dB level
0 or 1 dB	3 dB
2 or 3 dB	2 dB
4 to 9 dB	1 dB
10 dB or more	0 dB

Air flow ratings shown include static regain. Therefore, if silencers are installed immediately before or after elbows, transitions, at the intake or discharge of the system, or without duct, allowance to compensate for such conditions must be included when calculating the operating static pressure loss across the silencer. Failure to make allowances for these conditions can add several velocity heads to the static pressure loss of the system. All acoustic and aerodynamic performance obtained on a 24" x 24" cross sec-
